

# Patient Safety Indicators

MEASURE DESCRIPTION	UC IRVINE MEDICAL CENTER (December 2017 – November 2018)		TARGET (Vizient Risk Adjusted O/E Ratio)
	Lower is Better	Higher is Better	
PSI-02 Death in Low Mortality DRGs	0.00		0.00
PSI-03 Pressure Ulcer	1.01		1.04
PSI-04 Death among surgical inpatients with serious treatable complications	0.89		0.96
PSI-06 Iatrogenic Pneumothorax	0.53		0.90
PSI-08 Postoperative Hip Fracture	0.00		0.00
PSI-10 Postoperative Physio Metabol Derangement	0.00		0.00
PSI-14 Postoperative Wound Dehiscence	0.00		0.00
PSI-15 Accidental Puncture or Laceration	0.53		0.70
PSI-18 OB Trauma – Vaginal with Instrument	11.90		15.63
PSI-19 OB Trauma – Vaginal without Instrument	1.07		1.13

## What are we doing to improve:

UC Irvine Medical Center is dedicated to achieving the highest outcomes and working continuously to improve the quality of patient care and patient safety. We are committed to the standard of the government's Agency for Healthcare Research and Quality (AHRQ) patient safety indicator guidelines and evidence-based practices. Each patient safety indicator (PSI) case is thoroughly reviewed by different levels of the organization. Cases are reviewed by a Quality and Patient Safety physician/ nurse team, and by the Critical Events Management Team in order to identify opportunities for improvement. More specifically, all PSI 04 cases are reviewed by the Perioperative Committee and PSI 12 cases by the Anticoagulation Steering Committee to further ensure there are no gaps in care.
