

# Hospital Equity Measures Report

## General Information

Report Type:	Hospital Equity Measures Report
Year:	2024
Hospital Name:	UCI HEALTH-ORANGE
Facility Type:	General Acute Care Hospital
Hospital HCAI ID:	106301279
Report Period:	01/01/2024 - 12/31/2024
Status:	Submitted
Due Date:	11/29/2025
Last Updated:	11/13/2025
Hospital Location with Clean Water and Air:	N
Hospital Web Address for Equity Report:	<a href="https://www.ucihealth.org/">https://www.ucihealth.org/</a>

## Overview

Assembly Bill No. 1204 requires the Department of Health Care Access and Information (HCAI) to develop and administer a Hospital Equity Measures Reporting Program to collect and post summaries of key hospital performance and patient outcome data regarding sociodemographic information, including but not limited to age, sex, race/ethnicity, payor type, language, disability status, and sexual orientation and gender identity.

Hospitals (general acute, children's, and acute psychiatric) and hospital systems are required to annually submit their reports to HCAI. These reports contain summaries of each measure, the top 10 disparities, and the equity plans to address the identified disparities. HCAI is required to maintain a link on the HCAI website that provides access to the content of hospital equity measures reports and equity plans to the public. All submitted hospitals are required to post their reports on their websites, as well.

## Laws and Regulations

For more information on Assembly Bill No. 1204, please visit the following link by copying and pasting the URL into your web browser:

[https://leginfo.legislature.ca.gov/faces/billTextClient.xhtml?bill\\_id=202120220AB1204](https://leginfo.legislature.ca.gov/faces/billTextClient.xhtml?bill_id=202120220AB1204)

## Hospital Equity Measures

### Joint Commission Accreditation

General acute care hospitals are required to report three structural measures based on the Commission Accreditation's Health Care Disparities Reduction and Patient-Centered Communication Accreditation Standards. For more information on these measures, please visit the following link by copying and pasting the URL into your web browser:

<https://www.jointcommission.org/standards/r3-report/r3-report-issue-36-new-requirements-to-reduce-health-care-disparities/>

The first two structural measures are scored as "yes" or "no"; the third structural measure comprises the percentages of patients by five categories of preferred languages spoken, in addition to one other/ unknown language category.

Designate an individual to lead hospital health equity activities (Y = Yes, N = No).

N

Provide documentation of policy prohibiting discrimination (Y = Yes, N = No).

Y

Number of patients that were asked their preferred language, five defined categories and one other/ unknown languages category.

104350

Table 1. Summary of preferred languages reported by patients.

Languages	Number of patients who report preferring language	Total number of patients	Percentage of total patients who report preferring language (%)
English Language	79832	104350	76.5
Spanish Language	17092	104350	16.4
Asian Pacific Islander Languages	5959	104350	5.7
Middle Eastern Languages	760	104350	0.7
American Sign Language	84	104350	0.1
Other Languages	623	104350	0.6

## Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure

There are five domains that make up the CMS Hospital Commitment to HCHE measures. Each domain is scored as "yes" or "no." In order to score "yes," a general acute care hospital is required to confirm all the domain's attestations. Lack of one or more of the attestations results in a score of "no." For more information on the CMS Hospital Commitment to HCHE measures, please visit the following link by copying and pasting the URL into your web browser:

<https://data.cms.gov/provider-data/topics/hospitals/health-equity>

### Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure Domain 1: Strategic Planning (Yes/No)

- Our hospital strategic plan identifies priority populations who currently experience health disparities.
- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital strategic plan outlines specific resources that have been dedicated to achieving our equity goals.
- Our hospital strategic plan describes our approach for engaging key stakeholders, such as community-based organizations.

Y

### CMS HCHE Measure Domain 2: Data Collection (Yes/No)

- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital has training for staff in culturally sensitive collection of demographics and/or social determinant of health information.

- Our hospital inputs demographic and/or social determinant of health information collected from patients into structured, interoperable data elements using a certified electronic health record (EHR) technology.

Y

### CMS HCHE Measure Domain 3: Data Analysis (Yes/No)

- Our hospital stratifies key performance indicators by demographic and/or social determinants of health variables to identify equity gaps and includes this information in hospital performance dashboards.

Y

### CMS HCHE Measure Domain 4: Quality Improvement (Yes/No)

- Our hospital participates in local, regional or national quality improvement activities focused on reducing health disparities.

Y

### CMS HCHE Measure Domain 5: Leadership Engagement (Yes/No)

- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually reviews our strategic plan for achieving health equity.
- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually review key performance indicators stratified by demographic and/or social factors.

Y

## **Centers for Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH)**

General acute care hospitals are required to report on rates of screenings and intervention rates among patients above 18 years old for five health related social needs (HRSN), which are food insecurity, housing instability, transportation problems, utility difficulties, and interpersonal safety. These rates are reported separately as being screened as positive for any of the five HRSNs, positive for each individual HRSN, and the intervention rate for each positively screened HRSN. For more information on the CMS SDOH, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cms.gov/priorities/innovation/key-concepts/social-drivers-health-and-health-related-social-needs>

Number of patients admitted to an inpatient hospital stay who are 18 years or older on the date of admission and are screened for all of the five HRSN

14145

Total number of patients who are admitted to a hospital inpatient stay and who are 18 years or older on the date of admission

20964

Rate of patients admitted for an inpatient hospital stay who are 18 years or older on the date of admission, were screened for an HRSN, and who screened positive for one or more of the HRSNs

NA

Table 2. Positive screening rates and intervention rates for the five Health Related Social Needs of the Centers of Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH).

Social Driver of Health	Number of positive screenings	Rate of positive screenings (%)	Number of positive screenings who received intervention	Rate of positive screenings who received intervention (%)
Food Insecurity	934	7.0	0	
Housing Instability	678	5.0	0	
Transportation Problems	696	5.0	0	
Utility Difficulties	299	1.0	0	
Interpersonal Safety	19	0.0	0	

## Core Quality Measures for General Acute Care Hospitals

There are two quality measures from the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) survey. For more information on the HCAHPS survey, please visit the following link by copying and pasting the URL into your web browser:

<https://hcahpsonline.org/en/survey-instruments/>

### Patient Recommends Hospital

The first HCAHPS quality measure is the percentage of patients who would recommend the hospital to friends and family. For this measure, general acute care hospitals provide the percentage of patient respondents who responded "probably yes" or "definitely yes" to whether they would recommend the hospital, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for the percentages. The percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 19.

Number of respondents who replied "probably yes" or "definitely yes" to HCAHPS Question 19, "Would you recommend this hospital to your friends and family?"

443

Total number of respondents to HCAHPS Question 19

461

Percentage of total respondents who responded "probably yes" or "definitely yes" to HCAHPS Question 19

96.1

Total number of people surveyed on HCAHPS Question 19

2561

Response rate, or the percentage of people who responded to HCAHPS Question 19

18.0

Table 3. Patient recommends hospital by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

<b>Race and/or Ethnicity</b>	<b>Number of "probably yes" or "definitely yes" responses</b>	<b>Total number of responses</b>	<b>Percent of "probably yes" or "definitely yes" responses (%)</b>	<b>Total number of patients surveyed</b>	<b>Response rate of patients surveyed (%)</b>

Male					
Male-to-female (MTF)/ transgender female/trans					
Non-conforming gender					
Additional gender category or other					
Not disclosed					

## **Patient Received Information in Writing**

The second HCAHPS quality measure is the percentage of patients who reported receiving information in writing on symptoms and health problems to look out for after leaving the hospital. General acute care hospitals are required to provide the percentage of patient respondents who responded "yes" to being provided written information, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for these percentages. These percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 17.

Number of respondents who replied "yes" to HCAHPS Question 17, "During this hospital stay, did you get information in writing about what symptoms or health problems to look out for after you left the

hospital?"

401

Total number of respondents to HCAHPS Question 17

461

Percentage of respondents who responded "yes" to HCAHPS Question 17

87.0

Total number of people surveyed on HCAHPS Question 17

2561

Response rate, or the percentage of people who responded to HCAHPS Question 17

## Agency for Healthcare Research and Quality (AHRQ) Indicators

General acute care hospitals are required to report on two indicators from the Agency for Healthcare Research and Quality (AHRQ). For general information about AHRQ indicators, please visit the following link by copying and pasting the URL into your web browser:

<https://qualityindicators.ahrq.gov/>

### Pneumonia Mortality Rate

The Pneumonia Mortality Rate is defined as the rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission for patients ages 18 years and older. General acute care hospitals report the Pneumonia Mortality Rate by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Inpatient Quality Indicator is 20. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:

[https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI\\_20\\_Pneumonia\\_Mortality\\_Rate.pdf](https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_20_Pneumonia_Mortality_Rate.pdf)

Number of in-hospital deaths with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

20

Total number of hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

## Death Rate among Surgical Inpatients with Serious Treatable Complications

The Death Rate among Surgical Inpatients with Serious Treatable Complications is defined as the rate of in-hospital deaths per 1,000 surgical discharges among patients ages 18-89 years old or obstetric patients with serious treatable complications. General acute care hospitals report this measure by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Patient Safety Indicator is 04. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:

[https://qualityindicators.ahrq.gov/Downloads/Modules/PSI/V2023/TechSpecs/PSI\\_04\\_Death\\_Rate\\_among\\_Surgical\\_Inpatients\\_with\\_Serious\\_Treatable\\_Complications.pdf](https://qualityindicators.ahrq.gov/Downloads/Modules/PSI/V2023/TechSpecs/PSI_04_Death_Rate_among_Surgical_Inpatients_with_Serious_Treatable_Complications.pdf)

## **California Maternal Quality Care Collaborative (CMQCC) Core Quality Measures**

There are three core quality maternal measures adopted from the California Maternal Quality Care Collaborative (CMQCC).

### **CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate**

The CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate is defined as nulliparous women with a term (at least 37 weeks gestation), singleton baby in a vertex position delivered by cesarean birth. General acute care hospitals report the NTSV Cesarean Birth Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cmqcc.org/quality-improvement-toolkits/supporting-vaginal-birth/ntsv-cesarean-birth-measure-specifications>

## **CMQCC Vaginal Birth After Cesarean (VBAC) Rate**

The CMQCC Vaginal Birth After Cesarean (VBAC) Rate is defined as vaginal births per 1,000 deliveries by patients with previous Cesarean deliveries. General acute care hospitals report the VBAC Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The VBAC Rate uses the specifications of AHRQ Inpatient Quality Indicator 22. For more information, please visit the following link by copying and pasting the URL into your web browser:

[https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI\\_22\\_Vaginal\\_Birth\\_After\\_Cesarean\\_\(VBAC\)\\_Delivery\\_Rate\\_Uncomplicated.pdf](https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_(VBAC)_Delivery_Rate_Uncomplicated.pdf)

Number of vaginal delivery among cases with previous Cesarean delivery that meet the inclusion and exclusion criteria

86

Total number of birth discharges with previous Cesarean delivery that meet the inclusion and exclusion criteria

Rate of vaginal delivery per 1,000 deliveries by patients with previous Cesarean deliveries  
307.1

## **CMQCC Exclusive Breast Milk Feeding Rate**

The CMQCC Exclusive Breast Milk Feeding Rate is defined as the newborns per 100 who reached at least 37 weeks of gestation (or 3000g if gestational age is missing) who received breast milk

exclusively during their stay at the hospital. Other criteria are that the newborns did not go to the neonatal intensive care unit (NICU), transfer, or die, did not reflect multiple gestation, and did not have codes for parenteral nutrition or galactosemia. General acute care hospitals report the Exclusive Breast Milk Feeding Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The CMQCC Exclusive Breast Milk Feeding Rate uses the Joint Commission National Quality Measure PC-05. For more information, please visit the following link by copying and pasting the URL into your web browser: <https://manual.jointcommission.org/releases/TJC2024B/MIF0170.html>

Number of newborn cases that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

203

Total number of newborn cases born in the hospital that meet the inclusion and exclusion criteria

276

Rate of newborn cases per 100 that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

73.6

## **HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate**

General acute care hospitals are required to report several HCAI All-Cause Unplanned 30-Day Hospital Readmission Rates, which are broadly defined as the percentage of hospital-level, unplanned, all-cause readmissions after admission for eligible conditions within 30 days of hospital discharge for patients aged 18 years and older. These rates are first stratified based on any eligible condition, mental health disorders, substance use disorders, co-occurring disorders, and no behavioral health diagnosis. Then, each condition-stratified hospital readmission rate is further stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information on the HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, please visit the following link by copying and pasting the URL into your web browser:

[https://hcai.ca.gov/wp-content/uploads/2024/10/HCAI-All-Cause-Readmission-Rate-Exclusions\\_ADA.pdf](https://hcai.ca.gov/wp-content/uploads/2024/10/HCAI-All-Cause-Readmission-Rate-Exclusions_ADA.pdf)

## **HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate – Any Eligible Condition**

Number of inpatient hospital admissions which occurs within 30 days of the discharge date of an eligible index admission and were 18 years or older at time of admission

1841

Total number of patients who were admitted to the general acute care hospital and were 18 years or older at time of admission

14229

Rate of hospital-level, unplanned, all-cause readmissions after admission for any eligible condition within 30 days of hospital discharge for patients aged 18 and older

12.9

Table 10. HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate for any eligible condition by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

<b>Race and/or Ethnicity</b>	<b>Number of inpatient readmissions</b>	<b>Total number of admitted patients</b>	<b>Readmission rate (%)</b>
<b>American Indian or Alaska Native</b>	suppressed	suppressed	suppressed
<b>Asian</b>	350	2510	13.9

## **HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate - No Behavioral Health Diagnosis**

Number of inpatient hospital admissions which occurs within 30 days of the discharge date with no behavioral diagnosis and were 18 years or older at time of admission

1283

Total number of patients who were admitted to the general acute care hospital and were 18 years or older at time of admission

10238

Rate of hospital-level, unplanned, all-cause readmissions after admission with no behavioral diagnosis within 30 days of hospital discharge for patients aged 18 and older

12.5

Table 14. HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate with No Behavioral Diagnosis by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

<b>Race and/or Ethnicity</b>	<b>Number of inpatient readmissions</b>	<b>Total number of admitted patients</b>	<b>Readmission rate (%)</b>

## Health Equity Plan

All general acute care hospitals report a health equity plan that identifies the top 10 disparities and a written plan to address them.

## Top 10 Disparities

Disparities for each hospital equity measure are identified by comparing the rate ratios by stratification groups. Rate ratios are calculated differently for measures with preferred low rates and those with preferred high rates. Rate ratios are calculated after applying the California Health and Human Services Agency's "Data De-Identification Guidelines (DDG)," dated September 23, 2016.

Table 15. Top 10 disparities and their rate ratio values.

Measures	Stratifications	Stratification Group	Stratification Rate	Reference Group	Reference Rate	Rate Ratio
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)			18 to 34	9.5	1.5
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)			18 to 34	9.5	1.5
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)			18 to 34	9.5	1.4
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity			White	11.3	1.4
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Preferred Language			English Language	12.2	1.3
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Expected Payor			Private	11.1	1.3
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Preferred Language			English Language	12.2	1.2
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity			White	11.3	1.2
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity			White	11.3	1.2
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Expected Payor			Private	11.1	1.2

#### Plan to address disparities identified in the data

We have identified the top disparities using a rate ratio methodology in which the value illustrates how much higher the rates are for a given patient population stratification in comparison to another. For instance, a rate ratio of 1.5 would indicate that the former comparison group is 50% more likely to have the specified event when compared to the latter.

We recognize important limitations in the current method of identifying disparities. The performance metrics are not risk-adjusted, meaning they do not account for expected variation by age or other clinical factors. Because younger patients generally experience fewer complications and hospitalizations, observed differences in readmission rates by age group likely reflect, in part, underlying differences in patient risk profiles rather than inequitable care. Consequently, it is not unexpected that there are disparities involving higher readmission rates among older age groups compared to younger patients.

Disparity: Readmission rates between ages 35-49 vs 18-34 (1), 50-64 vs 18-34 (2), and 65 and older vs 18-34 (3) age groups demonstrated by 1.5, 1.5 and 1.4 rate ratios.

Action Plan: To address the age-related disparity in readmission rates, we plan to assess and strengthen efforts around patient health literacy. Patients' ability to understand discharge instructions, follow-up plans, and medication guidance-typically conveyed through discharge paperwork-is a key component of reducing readmissions. We will explore implementing age-tailored discharge education programs and integrating teach-back methods to ensure comprehension.

Additionally, we recognize that vision and hearing impairments may further limit understanding, and we aim to develop strategies to accommodate these needs during patient education and communication.

Disparity: Readmission rates between Black or African American vs White (4) patient population with a rate ratio of 1.4. Additionally, Asian vs White (5) and Hispanic or Latino vs White (6) patient populations both have a rate ratio of 1.2.

Action Plan: To reduce the identified disparity above, we plan to conduct equity-focused readmission case reviews within our existing readmission work groups and task forces. By closely examining processes and data through an equity lens, we aim to identify targeted opportunities for improvement. As an academic health system, we can leverage the engagement of medical students and residents—who are required to complete quality improvement projects—to participate in this work. We also plan to collaborate with community organizations to strengthen relationships with immigrant populations, better understand cultural barriers and preferences, and enhance patient navigation services. Additionally, we will provide refresher and explore requiring implicit bias training for all team members to promote equitable care practices.

Disparity: Readmission rates between Asian/Pacific Islander languages vs English (7) and Spanish language vs English (8) which have rate ratios of 1.3 and 1.2, respectively.

Action Plan: We aim to ensure that discharge instructions are culturally and linguistically appropriate for all patients. This includes implementing MyChart communications in patients' preferred languages and exploring the use of AI technologies to more efficiently and accurately meet the diverse language needs of our communities. Additionally, we plan to collaborate with Asian and Pacific Islander language groups to enhance the availability and quality of language support services.

Disparity: Readmission rates between Medicare payors vs Private payors (9) demonstrated by a rate ratio of 1.3, and Medicaid payors vs Private payors (10) shows a rate ratio of 1.2.

Action Plan: With a rate ratio of only 1.3, our goal is to eliminate this disparity and close the gap between the two patient populations. To achieve this, we will examine all potential contributors to readmissions, including confusion around medication use. Health literacy may play a key role, as some patients may have difficulty understanding medication instructions. We plan to collaborate with our School of Pharmacy to enhance patient education, provide medication coaching and support, and strengthen medication adherence.

## **Performance in the priority area**

General acute care hospitals are required to provide hospital equity plans that address the top 10 disparities by identifying population impact and providing measurable objectives and specific timeframes. For each disparity, hospital equity plans will address performance across priority areas: person-centered care, patient safety, addressing patient social drivers of health, effective treatment, care coordination, and access to care.

### **Person-centered care**

At UCI Health, we are driven by our desire to offer high-quality, friendly and easy-to-access care throughout Orange County and surrounding communities. We look to understand each person's unique circumstances and needs beyond their medical condition. Our focus on patient-centered care can be demonstrated by our patient satisfaction scores which contribute to our high ranks in many programs that assess health systems such as Vizient, Leapfrog, CMS Stars, and US News and World Report.

We have established a Patient and Family Advisory Council (PFAC) which allows for patients and families in our community to have a voice in ensuring patient needs are heard and met. At this venue, insights are shared with patients on the health center's efforts in improving the care delivered and patients are offered the opportunity to provide feedback.

In addition, there is also a priority to hear from our patients at the bedside as well. A nurse leader rounding program has been implemented to improve patient experience, nurse communication and discharge experience. Additionally, this program will provide meaningful feedback to nurses in real-time.

#### Patient safety

UCI Health is committed to becoming a high reliability organization (HRO) and eliminating preventable harm. Our commitment to becoming an HRO means embedding reliability and resilience into every level of our organization. We are fostering behaviors and systems that prioritize mindfulness, accountability, and learning from every event-no matter how small. By emphasizing preoccupation with failure, deference to expertise, and a just culture, we are empowering our workforce to speak up, identify risks early, and respond effectively. Through continuous training, leadership engagement, and data-driven improvement, UCI Health is creating a culture where every team member contributes to the goal of zero harm and consistent delivery of safe, high-quality care.

At UCI Health, we are on a continuous quest to provide exceptional patient care and service to our patients that starts with building a robust culture of safety. UCI Health has made a commitment to provide the safest care possible which is evident with the hospital's numerous awards in Quality and Safety. It has achieved an 'A' grade in the Leapfrog Hospital Safety program 20 times since 2014. The award highlights the academic health system's ongoing commitment to top-tier patient safety and quality care, consistently placing it among the top 30% of hospitals nationwide.

The medical center was also named a top provider of high-quality inpatient and outpatient care in the prestigious annual Vizient Inc. Quality and Accountability study in 2024. It is also one of the only five U.S. facilities recognized for excellence in outpatient care in the 2025 Vizient study.

#### Addressing patient social drivers of health

During this reporting period, UCI Health has advanced a coordinated approach to addressing the Social Determinants of Health (SDOH) that impact patient outcomes across inpatient and ambulatory settings. SDOH screening is embedded in Epic workflows and completed by nursing staff at the time of admission, covering domains such as housing, food access, transportation, and safety. Positive screens are automatically routed to Clinical Social Work for follow-up, allowing timely intervention and documentation of needs addressed. Using Find Help and a dedicated Unhoused Liaison, social workers connect patients to verified community resources, maintain support throughout the hospital stay, and provide a post-discharge call line staffed daily by a master's-level clinician to promote continuity of care and reduce readmission risk.

Collaboration and data-driven governance are at the core of this work. Through municipal partnerships with the City of Irvine and other community-based organizations, UCI Health extends care beyond the hospital by hosting Advance Care Planning and health education workshops that bring clinical expertise directly to community settings. These efforts align with UCOP guidance and SB 963 initiatives, strengthening safety and ethical reporting in partnership with agencies such as Waymakers. Internally, the Ambulatory Behavioral and Social Care Standards and Compliance Committee provides governance for SDOH documentation, workflows, and policy alignment, supported by Epic Reimagined dashboards that enhance transparency and performance tracking.

Together, these initiatives reflect UCI Health's commitment to equity, innovation, and human connection; advancing a high-reliability culture where addressing social needs is integral to achieving quality outcomes and improving community health.

## **Performance in the priority area continued**

Performance across all of the following priority areas.

### Effective treatment

As Orange County's only academic health system, UCI Health connects patients to top-ranked primary care physicians and more than 1000 specialists with the research and innovation of an elite university.

Furthermore, UCI Health demonstrates some of the lowest readmission rates among the academic medical centers in the nation. According to the Vizient Inc. Quality and Accountability study, the medical center's readmission rates are in the top five when compared against other academic medical centers in the nation. This performance reflects effective, comprehensive care that supports patients' recovery and reduces the need for patients to return to the hospital after discharge.

### Care coordination

Care coordination is about collaborating and having a patient-centered approach in providing seamless delivery of services across providers and settings. It refers to deliberate organization of services and making sure information and follow-up doesn't fall through the cracks. To enhance care coordination, UCI Health has partnered with CipherHealth which provides multi-channel automated outreach to patients after they are discharged with multiple language options tailored to our patient demographics such as Spanish, Vietnamese and Korean. This outreach program focuses on proactively addressing post discharge needs for patients with higher risk of readmission which helps prevent unnecessary returns to the hospital.

### Access to care

UCI Health is dedicated to ensuring high-quality care is accessible so patients can get the right care at the right time. A new acute care hospital with 144 beds offers next-generation hospital care in addition to other facilities at the Irvine medical campus including the Joe C. Wen & Family Center for Advanced Care and the Chao Family Comprehensive Cancer Center. These facilities will allow residents of coastal and south Orange County to have full and convenient access to leading-edge care. Additionally, UCI Health acquired four hospitals in Fountain Valley, Lakewood, Los Alamitos and Placentia Linda with plans to continue expanding its network of outpatient locations. This acquisition allows for UCI Health to serve more patients with Medicaid or Medicare.

There are additional mechanisms in place to improve access to care for underserved patients. For example, the UCI Gavin Herbert Eye Institute Eye Mobile for Children provides vision screenings to underserved children as well as other vision related care across Orange County.

In addition, the UCI Family Health Center, with locations in Santa Ana and Anaheim, is a federally qualified health center (FQHC). FQHCs are a critical resource for the underserved community, from newborn to older adults, delivering whole-person primary and preventative care. The Family Centers are a unique type of outpatient clinic that provide affordable, comprehensive care, including medical, dental and behavioral health services for communities where access to health care is challenging. The Family Health Centers are ambulatory clinics of UCI Health and play a crucial role in ensuring people have access to health care, regardless of insurance coverage or ability to pay. The clinics help people gain control over their health care by providing both primary and preventive care

services as well as chronic disease management. In addition to the culturally and linguistically appropriate care provided by physicians with expertise in family medicine, pediatrics, and obstetrics and gynecology, interdisciplinary team members provide services that play a crucial role as they represent a proactive rather than reactive approach to health care needs of the clinics' clients in the communities they serve.

There are several measures that are tracked and trended to monitor our care's accessibility such as the ability of new patients to schedule appointments, whether they are able to get care within ten days and more. Our performance on these measures exceeds that of many other peer health systems.

## **Methodology Guidelines**

Did the hospital follow the methodology in the Measures Submission Guide? (Y/N)

Y
