

Hospital Equity Measures Report

General Information

Report Type:	Hospital Equity Measures Report
Year:	2024
Hospital Name:	UCI HEALTH-PLACENTIA LINDA
Facility Type:	General Acute Care Hospital
Hospital HCAI ID:	106301297
Report Period:	1/1/2024 - 12/31/2024
Status:	Submitted
Due Date:	11/29/2025
Last Updated:	11/13/2025
Hospital Location with Clean Water and Air:	N
Hospital Web Address for Equity Report:	https://www.ucihealth.org/

Overview

Assembly Bill No. 1204 requires the Department of Health Care Access and Information (HCAI) to develop and administer a Hospital Equity Measures Reporting Program to collect and post summaries of key hospital performance and patient outcome data regarding sociodemographic information, including but not limited to age, sex, race/ethnicity, payor type, language, disability status, and sexual orientation and gender identity.

Hospitals (general acute, children's, and acute psychiatric) and hospital systems are required to annually submit their reports to HCAI. These reports contain summaries of each measure, the top 10 disparities, and the equity plans to address the identified disparities. HCAI is required to maintain a link on the HCAI website that provides access to the content of hospital equity measures reports and equity plans to the public. All submitted hospitals are required to post their reports on their websites, as well.

Laws and Regulations

For more information on Assembly Bill No. 1204, please visit the following link by copying and pasting the URL into your web browser:

https://leginfo.legislature.ca.gov/faces/billTextClient.xhtml?bill_id=202120220AB1204

Hospital Equity Measures

Joint Commission Accreditation

General acute care hospitals are required to report three structural measures based on the Commission Accreditation's Health Care Disparities Reduction and Patient-Centered Communication Accreditation Standards. For more information on these measures, please visit the following link by copying and pasting the URL into your web browser:

<https://www.jointcommission.org/standards/r3-report/r3-report-issue-36-new-requirements-to-reduce-health-care-disparities/>

The first two structural measures are scored as "yes" or "no"; the third structural measure comprises the percentages of patients by five categories of preferred languages spoken, in addition to one other/unknown language category.

Designate an individual to lead hospital health equity activities (Y = Yes, N = No).

N

Provide documentation of policy prohibiting discrimination (Y = Yes, N = No).

Y

Number of patients that were asked their preferred language, five defined categories and one other/unknown languages category.

34715

Table 1. Summary of preferred languages reported by patients.

Languages	Number of patients who report preferring language	Total number of patients	Percentage of total patients who report preferring language (%)
English Language	29839	34715	86
Spanish Language	3746	34715	10.8
Asian Pacific Islander Languages	771	34715	2.2
Middle Eastern Languages	131	34715	0.4
American Sign Language	suppressed	34715	suppressed
Other Languages	suppressed	34715	suppressed

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure

There are five domains that make up the CMS Hospital Commitment to HCHE measures. Each domain is scored as "yes" or "no." In order to score "yes," a general acute care hospital is required to confirm all the domain's attestations. Lack of one or more of the attestations results in a score of "no." For more information on the CMS Hospital Commitment to HCHE measures, please visit the following link by copying and pasting the URL into your web browser:

<https://data.cms.gov/provider-data/topics/hospitals/health-equity>

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure Domain 1: Strategic Planning (Yes/No)

- Our hospital strategic plan identifies priority populations who currently experience health disparities.
- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital strategic plan outlines specific resources that have been dedicated to achieving our equity goals.
- Our hospital strategic plan describes our approach for engaging key stakeholders, such as community-based organizations.

Y

CMS HCHE Measure Domain 2: Data Collection (Yes/No)

- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital has training for staff in culturally sensitive collection of demographics and/or social determinant of health information.

- Our hospital inputs demographic and/or social determinant of health information collected from patients into structured, interoperable data elements using a certified electronic health record (EHR) technology.

Y

CMS HCHE Measure Domain 3: Data Analysis (Yes/No)

- Our hospital stratifies key performance indicators by demographic and/or social determinants of health variables to identify equity gaps and includes this information in hospital performance dashboards.

Y

CMS HCHE Measure Domain 4: Quality Improvement (Yes/No)

- Our hospital participates in local, regional or national quality improvement activities focused on reducing health disparities.

Y

CMS HCHE Measure Domain 5: Leadership Engagement (Yes/No)

- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually reviews our strategic plan for achieving health equity.
- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually review key performance indicators stratified by demographic and/or social factors.

Y

Centers for Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH)

General acute care hospitals are required to report on rates of screenings and intervention rates among patients above 18 years old for five health related social needs (HRSN), which are food insecurity, housing instability, transportation problems, utility difficulties, and interpersonal safety. These rates are reported separately as being screened as positive for any of the five HRSNs, positive for each individual HRSN, and the intervention rate for each positively screened HRSN. For more information on the CMS SDOH, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cms.gov/priorities/innovation/key-concepts/social-drivers-health-and-health-related-social-needs>

Number of patients admitted to an inpatient hospital stay who are 18 years or older on the date of admission and are screened for all of the five HRSN

2764

Total number of patients who are admitted to a hospital inpatient stay and who are 18 years or older on the date of admission

3253

Rate of patients admitted for an inpatient hospital stay who are 18 years or older on the date of admission, were screened for an HRSN, and who screened positive for one or more of the HRSNs

NA

Table 2. Positive screening rates and intervention rates for the five Health Related Social Needs of the Centers of Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH).

Social Driver of Health	Number of positive screenings	Rate of positive screenings (%)	Number of positive screenings who received intervention	Rate of positive screenings who received intervention (%)
Food Insecurity	6	0	0	
Housing Instability	58	2	0	
Transportation Problems	8	0	0	
Utility Difficulties	5	0	0	
Interpersonal Safety	14	0	0	

Core Quality Measures for General Acute Care Hospitals

There are two quality measures from the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) survey. For more information on the HCAHPS survey, please visit the following link by copying and pasting the URL into your web browser:

<https://hcahpsonline.org/en/survey-instruments/>

Patient Recommends Hospital

The first HCAHPS quality measure is the percentage of patients who would recommend the hospital to friends and family. For this measure, general acute care hospitals provide the percentage of patient respondents who responded "probably yes" or "definitely yes" to whether they would recommend the hospital, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for the percentages. The percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 19.

Number of respondents who replied "probably yes" or "definitely yes" to HCAHPS Question 19, "Would you recommend this hospital to your friends and family?"

378

Total number of respondents to HCAHPS Question 19

420

Percentage of total respondents who responded "probably yes" or "definitely yes" to HCAHPS Question 19

90

Total number of people surveyed on HCAHPS Question 19

2471

Response rate, or the percentage of people who responded to HCAHPS Question 19

17

Table 3. Patient recommends hospital by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
American Indian or Alaska Native					
Asian					
Black or African American					
Hispanic or Latino					
Middle Eastern or North African					
Multiracial and/or Multiethnic (two or more races)					
Native Hawaiian or Pacific Islander					
White					
Age	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Age < 18					
Age 18 to 34					
Age 35 to 49					
Age 50 to 64					
Age 65 Years and Older					
Sex assigned at birth	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Female					
Male					
Unknown					
Payer Type	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Medicare					
Medicaid					
Private					
Self-Pay					
Other					
Preferred Language	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
English Language					
Spanish Language					
Asian Pacific Islander Languages					
Middle Eastern Languages					
American Sign Language					
Other/Unknown Languages					

Disability Status	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Does not have a disability					
Has a mobility disability					
Has a cognition disability					
Has a hearing disability					
Has a vision disability					
Has a self-care disability					
Has an independent living disability					

Sexual Orientation	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Lesbian, gay or homosexual					
Straight or heterosexual					
Bisexual					
Something else					
Don't know					
Not disclosed					

Gender Identity	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Female					
Female-to-male (FTM)/ transgender male/trans man					
Male					
Male-to-female (MTF)/ transgender female/trans					
Non-conforming gender					
Additional gender category or other					
Not disclosed					

Patient Received Information in Writing

The second HCAHPS quality measure is the percentage of patients who reported receiving information in writing on symptoms and health problems to look out for after leaving the hospital. General acute care hospitals are required to provide the percentage of patient respondents who responded "yes" to being provided written information, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for these percentages. These percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 17.

Number of respondents who replied "yes" to HCAHPS Question 17, "During this hospital stay, did you get information in writing about what symptoms or health problems to look out for after you left the

hospital?"

353

Total number of respondents to HCAHPS Question 17

420

Percentage of respondents who responded "yes" to HCAHPS Question 17

84

Total number of people surveyed on HCAHPS Question 17

2471

Response rate, or the percentage of people who responded to HCAHPS Question 17

17

Table 4. Patient reports receiving information in writing about symptoms or health problems by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "yes" responses	Total number of responses	Percentage of "yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)

Agency for Healthcare Research and Quality (AHRQ) Indicators

General acute care hospitals are required to report on two indicators from the Agency for Healthcare Research and Quality (AHRQ). For general information about AHRQ indicators, please visit the following link by copying and pasting the URL into your web browser:

<https://qualityindicators.ahrq.gov/>

Pneumonia Mortality Rate

The Pneumonia Mortality Rate is defined as the rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission for patients ages 18 years and older. General acute care hospitals report the Pneumonia Mortality Rate by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Inpatient Quality Indicator is 20. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:

https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_20_Pneumonia_Mortality_Rate.pdf

Death Rate among Surgical Inpatients with Serious Treatable Complications

The Death Rate among Surgical Inpatients with Serious Treatable Complications is defined as the rate of in-hospital deaths per 1,000 surgical discharges among patients ages 18-89 years old or obstetric patients with serious treatable complications. General acute care hospitals report this measure by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Patient Safety Indicator is 04. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:

https://qualityindicators.ahrq.gov/Downloads/Modules/PSI/V2023/TechSpecs/PSI_04_Death_Rate_among_Surgical_Inpatients_with_Serious_Treatable_Complications.pdf

California Maternal Quality Care Collaborative (CMQCC) Core Quality Measures

There are three core quality maternal measures adopted from the California Maternal Quality Care Collaborative (CMQCC).

CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate

The CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate is defined as nulliparous women with a term (at least 37 weeks gestation), singleton baby in a vertex position delivered by cesarian birth. General acute care hospitals report the NTSV Cesarean Birth Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cmqcc.org/quality-improvement-toolkits/supporting-vaginal-birth/ntsv-cesarean-birth-measure-specifications>

CMQCC Vaginal Birth After Cesarean (VBAC) Rate

The CMQCC Vaginal Birth After Cesarean (VBAC) Rate is defined as vaginal births per 1,000 deliveries by patients with previous Cesarean deliveries. General acute care hospitals report the VBAC Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The VBAC Rate uses the specifications of AHRQ Inpatient Quality Indicator 22. For more information, please visit the following link by copying and pasting the URL into your web browser:

[https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_\(VBAC\)_Delivery_Rate_Uncomplicated.pdf](https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_(VBAC)_Delivery_Rate_Uncomplicated.pdf)

Number of vaginal delivery among cases with previous Cesarean delivery that meet the inclusion and exclusion criteria

CMQCC Exclusive Breast Milk Feeding Rate

The CMQCC Exclusive Breast Milk Feeding Rate is defined as the newborns per 100 who reached at least 37 weeks of gestation (or 3000g if gestational age is missing) who received breast milk

exclusively during their stay at the hospital. Other criteria are that the newborns did not go to the neonatal intensive care unit (NICU), transfer, or die, did not reflect multiple gestation, and did not have codes for parenteral nutrition or galactosemia. General acute care hospitals report the Exclusive Breast Milk Feeding Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The CMQCC Exclusive Breast Milk Feeding Rate uses the Joint Commission National Quality Measure PC-05. For more information, please visit the following link by copying and pasting the URL into your web browser: <https://manual.jointcommission.org/releases/TJC2024B/MIF0170.html>

Number of newborn cases that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate

General acute care hospitals are required to report several HCAI All-Cause Unplanned 30-Day Hospital Readmission Rates, which are broadly defined as the percentage of hospital-level, unplanned, all-cause readmissions after admission for eligible conditions within 30 days of hospital discharge for patients aged 18 years and older. These rates are first stratified based on any eligible condition, mental health disorders, substance use disorders, co-occurring disorders, and no behavioral health diagnosis. Then, each condition-stratified hospital readmission rate is further stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information on the HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, please visit the following link by copying and pasting the URL into your web browser:

https://hcai.ca.gov/wp-content/uploads/2024/10/HCAI-All-Cause-Readmission-Rate-Exclusions_ADA.pdf

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate – Any Eligible Condition

Number of inpatient hospital admissions which occurs within 30 days of the discharge date of an eligible index admission and were 18 years or older at time of admission

293

Total number of patients who were admitted to the general acute care hospital and were 18 years or older at time of admission

2297

Rate of hospital-level, unplanned, all-cause readmissions after admission for any eligible condition within 30 days of hospital discharge for patients aged 18 and older

12.8

Health Equity Plan

All general acute care hospitals report a health equity plan that identifies the top 10 disparities and a written plan to address them.

Top 10 Disparities

Disparities for each hospital equity measure are identified by comparing the rate ratios by stratification groups. Rate ratios are calculated differently for measures with preferred low rates and those with preferred high rates. Rate ratios are calculated after applying the California Health and Human Services Agency's "Data De-Identification Guidelines (DDG)," dated September 23, 2016.

Table 15. Top 10 disparities and their rate ratio values.

Measures	Stratifications	Stratification Group	Stratification Rate	Reference Group	Reference Rate	Rate Ratio
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity			Asian	8.8	1.5
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity			Asian	8.8	1.4
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Expected Payor			Private	10	1.3
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Expected Payor			Private	10	1.3
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Sex Assigned at Birth			Male	11.6	1.2
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)			50 to 64	13.1	1

Plan to address disparities identified in the data

We have identified the top disparities using a rate ratio methodology in which the value illustrates how much higher the rates are for a given patient population stratification in comparison to another. For instance, a rate ratio of 1.5 would indicate that the former comparison group is 50% more likely to have the specified event when compared to the latter.

We recognize important limitations in the current method of identifying disparities. The performance metrics are not risk-adjusted, meaning they do not account for expected variation by age or other clinical factors. Because younger patients generally experience fewer complications and hospitalizations, observed differences in readmission rates by age group likely reflect, in part, underlying differences in patient risk profiles rather than inequitable care. Consequently, it is not unexpected that there are disparities involving higher readmission rates among older age groups compared to younger patients.

Disparity: All-Cause Unplanned 30-Day Hospital Readmission for White vs Asian (1), Hispanic vs Asian (2), Female vs Male (3), Medicare vs Private (4), and Medicaid vs Private (5) with identified rate ratios of 1.2-1.5 respectively.

Action Plan:

The Quality Department conducts reviews of hospital readmissions to assess appropriateness of care and identify any provider management concerns. Cases requiring further evaluation are referred to Peer Review. In addition, readmission data are regularly shared with the Quality Council to support multidisciplinary collaboration and identify opportunities for improvement.

Moving forward, a dedicated workgroup representing multiple disciplines will be established to conduct a deeper analysis of readmission data, identify disparities, and develop targeted strategies with measurable countermeasures. This may include evaluating discharge planning processes through a health literacy lens to ensure patient education materials and discharge instructions are accessible and culturally responsive.

Furthermore, the initiative will focus on strengthening post-discharge support by expanding the availability of patient resources and clearly outlining points of contact for patients who have questions or concerns after leaving the hospital. These efforts aim to promote equitable care transitions and reduce preventable readmissions across all patient populations.

Performance in the priority area

General acute care hospitals are required to provide hospital equity plans that address the top 10 disparities by identifying population impact and providing measurable objectives and specific timeframes. For each disparity, hospital equity plans will address performance across priority areas: person-centered care, patient safety, addressing patient social drivers of health, effective treatment, care coordination, and access to care.

Person-centered care

At UCI Health - Placentia Linda, patient experience is increasingly becoming a focus. According to our data, our strengths include the timeliness of hospital staff helping patients (H-COMP-3) and providing patients helpful information about what to do during their recovery at home (H-COMP-6). However, there are improvement opportunities for our physicians to communicate more often with our patients (H-COMP-2) and our staff to provide explanations about medicines before administering them to patients (H-COMP-5).

To improve our performance in patient-centered care, we invite past patients to our Patient Experience Committee and Patient/Medication Safety committee. We also fully implemented our Nurse Leader Visits program where our leaders can hear from our patients at the bedside.

Patient safety

UCI Health - Placentia Linda is committed to becoming a high reliability organization (HRO) and eliminating preventable harm. We are planning to become an HRO and embed reliability and resilience into every level of our organization. Next year, we will be launching our HRO initiative to foster behaviors and systems that prioritize mindfulness, accountability, and learning from every event-no matter how small. By emphasizing preoccupation with failure, deference to expertise, and a just culture, we are empowering our workforce to speak up, identify risks early, and respond effectively. Through continuous training, leadership engagement, and data-driven improvement, UCI Health - Placentia Linda is creating a culture where every team member contributes to the goal of zero harm and consistent delivery of safe, high-quality care.

At UCI Health, we are on a continuous quest to provide exceptional patient care and service to our patients that starts with building a robust culture of safety. Since joining the UCI Health system in 2024, UCI Health - Placentia Linda has voluntarily participated in this highly visible survey that assesses hospital performance based on national measures and safety practices that are proven to reduce preventable patient harm and are endorsed by the National Quality Forum (NQF). UCI Health - Placentia Linda has made a commitment to provide the safest care possible which is evident with the hospital's improvement in the Leapfrog Grades in which a B was achieved for the last 2 reporting periods from years of a C.

Addressing patient social drivers of health

UCI Health - Placentia Linda has made significant efforts to incorporate Social Drivers of Health (SDOH) screening for patients. Last year, 85% of patients admitted for an inpatient hospital stay who are 18 years or older on the date of admission were able to provide input on whether they were experiencing food insecurity, house instability, transportation problems, utility difficulties, or

interpersonal safety. Of these patients, there were not many patients identified that they had these experiences.

Performance in the priority area continued

Performance across all of the following priority areas.

Effective treatment

According to our latest CMS Stars report, the care at UCI Health - Placentia Linda is above the national average in the Timely & Effective Care domain. Strengths include Severe Sepsis and Septic Shock, which is performing in the top 10 percent, and Follow-up for Normal Colonoscopy in Average Risk Patients. However, there are opportunities for improvement in the Abdomen CT Use of Contrast Material metric. There is also monitoring of our patients and whether they are readmitted within 30 days in which current performance is around average with aspirations to improve.

Care coordination

UCI Health - Placentia Linda had assessed skilled nursing facilities, hospice facilities, and home health in its surrounding areas and ranked them based on metrics evaluating quality and patient experience. This information was provided to our patients. There are also plans on implementing Dispatch Health in the Emergency Department.

Access to care

UCI Health is dedicated to ensuring high-quality care is accessible so patients can get the right care at the right time. A new acute care hospital with 144 beds offers next-generation hospital care in addition to other facilities at the Irvine medical campus including the Joe C. Wen & Family Center for Advanced Care and the Chao Family Comprehensive Cancer Center. These facilities will allow residents of coastal and south Orange County to have full and convenient access to leading-edge care. Additionally, UCI Health acquired four hospitals in Fountain Valley, Lakewood, Los Alamitos and Placentia Linda with plans to continue expanding its network of outpatient locations. This acquisition allows for UCI Health to serve more patients with Medicaid or Medicare.

There are additional mechanisms in place to improve access to care for underserved patients. For example, the UCI Gavin Herbert Eye Institute Eye Mobile for Children provides vision screenings to underserved children as well as other vision related care across Orange County.

In addition, the UCI Family Health Center, with locations in Santa Ana and Anaheim, is a federally qualified health center (FQHC). FQHCs are a critical resource for the underserved community, from newborn to older adults, delivering whole-person primary and preventative care. The Family Health Centers are a unique type of outpatient clinic that provide affordable, comprehensive care, including medical, dental and behavioral health services for communities where access to health care is challenging. The Family Health Centers are ambulatory clinics of UCI Health and play a crucial role in ensuring people have access to health care, regardless of insurance coverage or ability to pay. The clinics help people gain control over their health care by providing both primary and preventive care services as well as chronic disease management. In addition to the culturally and linguistically appropriate care provided by physicians with expertise in family medicine, pediatrics, and obstetrics and gynecology, interdisciplinary team members provide services that play a crucial role as they represent a proactive rather than reactive approach to health care needs of the clinics' clients in the communities they serve.

Methodology Guidelines

Did the hospital follow the methodology in the Measures Submission Guide? (Y/N)

Y
